CLASSIC METAL STAINLESS STEEL AIR SEAL VAULT

Every Classic Metal Vault is guaranteed to protect its contents from water and other elements through the use of an air seal principle. Each vault is tested prior to being interred to provide peace of mind. Our stainless steel vault uses 304 grade stainless which is the highest quality available and is the same kind used in the St. Louis Gateway Arch and the roof of the Chrysler Building.

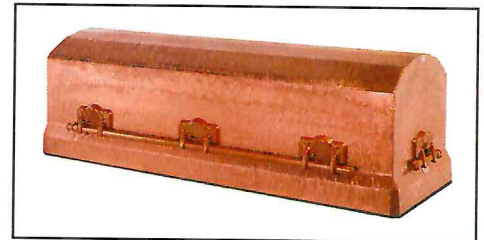

CLASSIC METAL ALUMINUM AIR SEAL VAULT

Our 12 gauge air seal aluminum vault is made of high strength aluminum that is extremely long lasting as it develops a protective coating when exposed to the elements.

CLASSIC METAL 12 Ga. STEEL VAULT

Our 12 gauge air seal steel vault closes by the same principle as our stainless steel and aluminum vault at an extremely affordable price.

OXFORD VAULT

Reinforced, lined, concrete top seal vault.

GRAVE LINER

Concrete box that satisfies minimum requirements of our cemetery. Non protective.
